

Home Sick - Logic Puzzle

Five students in Mrs. Hill's class each became ill on a certain day of the week and had to stay at home for a number of days. While the children were home sick, their mothers made them each their favorite soup for lunch each day while they watched cartoons. From the clues provided, determine which child came down with which illness, which soup they were served and on which day he or she did not go to school.

1. The person who had the fever is not Molly.
2. Nancy did not have a fever.
3. The person who had the measles missed their first day sometime before Alex.
4. The child who did not return to school on Monday did not have a migraine.
5. The person who had the chicken pox left school sometime sometime before Alex.
6. Jacob was unfortunate to come down with a nasty case of the flu.
7. The five students are Molly, the person who had a migraine, the student who was served beef and barley soup, the person who left school on Thursday and Alex.
8. The child who first missed school on Thursday wasn't served minestrone soup.
9. The student who had the fever was not Axel.
10. Molly was given a steaming bowl of chicken noodle soup for lunch.
11. The student who had the beef and barley soup left the day after the child whose mother fed them tomato soup.
12. The student that did not show up for class on Thursday didn't have the flu.
